

# Mini LCL

- Cut and loop pile bars independently controlled
- Small compact or wider geometric designs
- Compatibility with sliding needle bar and multi roll attachment

Mini Level-Cut-Loop

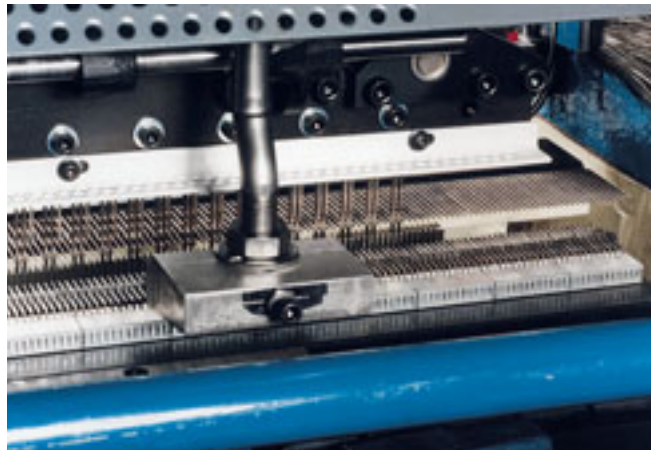

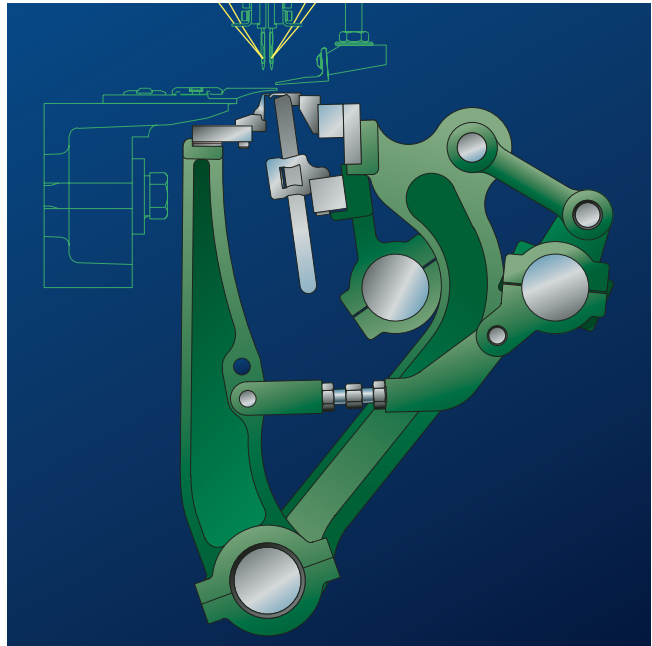

## Performance

Mini-LCL is produced on a dual sliding needle bar machine with a rear bar for cut pile and front bar for loop pile. Lateral patterning capability is achieved by the ability to shift both cut pile and loop pile bars independently.

Tuft rows can consist of a variable mixture of loop pile and cut pile which have the same pile height and produce a 'level' effect. Both needlebars can be configured to facilitate a wide range of pattern possibilities. Any designs which can be made with a staggered or straight sliding needle bar can therefore be incorporated into Mini-LCL. Both small compact designs and wider cross-over geometric designs are therefore created by this simple, yet precise method of patterning. Additional design potential is created when used in conjunction with a Multi Roll Attachment.

Gauges presently available are: 1/8", 1/10", 5/32"
